About Tertiary Infotech Academy

WSQ course provider delivering ICT and business technology training.

UEN: 201200696W

Training format: instructor-led, hands-on, assessment-ready.

About the Trainer

Your Trainer

General Trainer template -
to be completed by the trainer

NAME

TITLE / DESIGNATION

About the Trainer

Dr. Alfred Ang

Principal Trainer
Tertiary Infotech Academy Pte. Ltd.

ROLE

Principal Trainer, Tertiary Infotech Academy Pte. Ltd.

QUALIFICATIONS

PhD - specialises in AI, automation, software engineering and cloud learning.

DELIVERS

WSQ courses on cloud fundamentals, AI, automation and app development.

FOUNDER

Founder and lead instructor at Tertiary Infotech / Tertiary Courses.

Digital Attendance

 Scan SSG digital attendance at required checkpoints.

 Minimum 75% attendance is required.

 Use the same registered learner identity throughout.

Ground Rules

1

Set your mobile phone to silent mode.

2

Participate actively - no question is too small.

3

Mutual respect: agree to disagree.

4

One conversation at a time.

5

Be punctual; return from breaks on time.

6

75% attendance is required.

Course Objectives

Domain 1

Labs 1-3

Cloud concepts, portal and shell basics

Domain 2

Labs 4-11

Azure architecture and core services

Domain 3

Labs 12-16

Management and governance

Outcome

AZ-900

Hands-on readiness for fundamentals topics

Learning Resources

Azure Portal: <https://portal.azure.com>

Azure Cloud Shell: <https://shell.azure.com>

Official AZ-900 study guide and Microsoft Learn references.

Assessment Flow Reminder

The TRAQOM QR code and LMS submission are both handled through the LMS/TMS portal.

Take the Online AZ-900 Practice Exams

- Reinforce AZ-900 domains with realistic, exam-style questions before assessment day.
- Use practice sets to test cloud concepts, Azure services, governance, cost and monitoring.
- Review mode helps you check the correct answer and revisit the concept after each question.
- Complete the practice questions from Google Classroom, then bring difficult items to review.

Access and practise at:

[Google Classroom > Practice Exams](#)

The screenshot displays the 'Tertiary Exams' website interface. At the top, there is a navigation bar with a blue circular logo, the text 'Tertiary Exams', and links for 'Practice Exam' and 'About Us'. A blue 'Get started' button is located in the top right corner. The main heading is 'Microsoft Azure Fundamentals (AZ-900) Practice Exams'. Below this, there are three interactive cards: 'MODE' with 'Practice' selected (indicated by a blue underline), 'FOCUS' with 'AZ-900' selected (indicated by a green underline), and 'ACCESS' with 'Class link' selected (indicated by a purple underline). To the right of these cards is a 'PRACTICE DETAILS' box containing the text: 'Exam code AZ-900', 'Use Review', and 'Domains 3'.

Two-Day Lesson Flow

- Day 1: Labs 1-8 - portal, Cloud Shell, regions, compute, app service, containers and networking.
- Day 2: Labs 9-16 - storage, SQL, Entra ID, RBAC, tags, locks, policy, cost and monitoring.
- All lab work reuses the resource group rg-az900-labs unless the lab cleanup says otherwise.

Azure Resource Model

The labs repeatedly use this hierarchy: sign in to the tenant, work inside a subscription, place resources in rg-az900-labs, then govern them with tags, RBAC, locks, policy, cost controls and monitoring.

Two-Day Azure Lab Flow

The slide deck, Learner Guide and Lesson Plan follow this same lab sequence.

Azure Services Practised

Service groups in the diagram map directly to Labs 4-12 and the AZ-900 service domain.

Management and Governance Loop

The Day 2 labs turn resources into governed cloud assets through identity, access, policy and monitoring.

Cost and Monitoring Lifecycle

Cost estimation, budgets, Advisor, Service Health, Monitor and cleanup are handled as one operating loop.

AZ-900 Domain Map

AZ-900 Domain Weight Matrix

Domain	Exam Weight	Labs	Practice Priority
Cloud Concepts	25-30%	1-3	Moderate
Architecture & Services	35-40%	4-11	High
Management & Governance	30-35%	12-16	High

This matrix mirrors the CySA+ risk-matrix layout, adapted to AZ-900 domain coverage and lab priorities.

Azure Shared Responsibility Layers

Learners configure the top layers in the labs; Microsoft operates the lower platform and physical layers.

Lab 1 - Tour the Azure Portal and Create Your First Resource Group

Domain 1 - Describe cloud concepts

In this lab you take a guided tour of the Azure portal - the web-based console you will use throughout this course - and create the resource group `rg-az900-labs` that hosts every resource you build...

Day 1

[labs/lab-01-azure-portal-tour.md](#)

Hands-on

Follow the Learner Guide exactly for commands, portal fields, verification and cleanup.

Lab 1 - Key Steps

Step 1 - Sign in to the Azure portal

Step 2 - Explore the portal menu and global navigation

Step 3 - Use the global search bar

Step 4 - Explore the top toolbar icons

Step 5 - Customise portal settings

Step 6 - View and edit your dashboard, and pin a service

Lab 1 - Verify and Clean Up

Verification

1. Keep rg-az900-labs - it is reused by every lab in this course and is only deleted at the end of the course .
2. A resource group with no resources in it costs nothing.
3. Optional: if you added extra dashboard tiles you don't want, open Dashboard → Edit, remove them and Save.
4. How to navigate the Azure portal: portal menu, global search, All services, notifications and Cloud Shell icons.

Cleanup Discipline

1. Run the lab cleanup section exactly.
2. Keep rg-az900-labs only when the next lab needs it.
3. Confirm no paid resource is left running.
4. Lab 16 performs the final course cleanup.

Lab 2 - Get Started with Azure Cloud Shell (CLI and PowerShell)

Domain 1 - Describe cloud concepts

In this lab you open Azure Cloud Shell - a browser-based terminal with the Azure CLI and Azure PowerShell pre-installed and pre-authenticated - and use it to inspect your subscription, manage the `rg-...

Day 1

[labs/lab-02-cloud-shell-cli.md](#)

Hands-on

Follow the Learner Guide exactly for commands, portal fields, verification and cleanup.

Lab 2 - Key Steps

Step 1 - Open Cloud Shell and choose Bash

Step 2 - Complete the first-run storage setup

Step 3 - Inspect your account with the Azure CLI

Step 4 - List resource groups

Step 5 - Create the resource group with the CLI
(idempotent)

Step 6 - (Optional) Try interactive mode

Lab 2 - Verify and Clean Up

Verification

1. Keep everything: - rg-az900-labs is reused by all later labs - do not delete it .
2. The Cloud Shell storage account is tiny and costs only cents per month; keep it for the rest of the course.
3. If you ever want to remove it after the course, delete the resource group named like cloud-shell-storage-southeastasia.
4. Remove only the scratch file if you like:

Cleanup Discipline

1. Run the lab cleanup section exactly.
2. Keep rg-az900-labs only when the next lab needs it.
3. Confirm no paid resource is left running.
4. Lab 16 performs the final course cleanup.

Lab 3 - Explore Regions, Region Pairs and Availability Zones

Domain 1 - Describe cloud concepts

In this lab you explore Azure's global infrastructure - regions, region pairs and availability zones - using the CLI, Microsoft's interactive datacenter map, and a latency test tool, and you reason...

Day 1

labs/lab-03-regions-
availability-
zones.md

Hands-on

Follow the Learner Guide exactly for commands, portal fields, verification and cleanup.

Lab 3 - Key Steps

Step 1 - List all Azure regions with the CLI

Step 2 - Explore the global infrastructure map

Step 3 - Identify Southeast Asia's paired region

Step 4 - Check which VM SKUs support availability zones

Step 5 - See zones in the portal VM creation flow

Step 6 - Test your latency to Azure regions

Lab 3 - Verify and Clean Up

Verification

1. Nothing was created in this lab - the VM wizard was cancelled before deployment, and CLI commands were read-only.
2. rg-az900-labs remains untouched and is reused in Lab 4.
3. How to list Azure regions and their paired regions with az account list-locations and JMESPath queries.
4. The hierarchy geography → region → availability zone, and that Southeast Asia pairs with East Asia .

Cleanup Discipline

1. Run the lab cleanup section exactly.
2. Keep rg-az900-labs only when the next lab needs it.
3. Confirm no paid resource is left running.
4. Lab 16 performs the final course cleanup.

Lab 4 - Create a Windows Virtual Machine in the Portal

Domain 2 - Describe Azure architecture and services

In this lab you deploy a Windows Server 2022 virtual machine through the portal, connect to it over RDP, install the IIS web server, expose it on port 80 through a network security group rule, and then...

Day 1

labs/lab-04-
windows-vm-
portal.md

Hands-on

Follow the Learner Guide exactly for commands, portal fields, verification and cleanup.

Lab 4 - Key Steps

Step 1 - Start the Create VM wizard

Step 2 - Set credentials and inbound ports

Step 3 - Review the remaining tabs, then create

Step 4 - Watch the deployment

Step 5 - Connect via RDP

Step 6 - Install IIS with PowerShell inside the VM

Lab 4 - Verify and Clean Up

Verification

1. When you no longer need it: 1.
2. Open Virtual machines → vm-az900-win01 → Delete.
3. In the delete pane, tick the checkboxes to also delete the OS disk, Network interface and Public IP address, then confirm.
4. Do not delete the resource group rg-az900-labs - it is reused by every remaining lab .

Cleanup Discipline

1. Run the lab cleanup section exactly.
2. Keep rg-az900-labs only when the next lab needs it.
3. Confirm no paid resource is left running.
4. Lab 16 performs the final course cleanup.

Lab 5 - Create a Linux VM with the Azure CLI

Domain 2 - Describe Azure architecture and services

In this lab you provision an Ubuntu virtual machine entirely from the command line, open a port, SSH in, install the NGINX web server, check its power state, and cleanly delete it - experiencing the CLI...

Day 1

labs/lab-05-linux-vm-cli.md

Hands-on

Follow the Learner Guide exactly for commands, portal fields, verification and cleanup.

Lab 5 - Key Steps

Step 1 - Ensure the resource group exists

Step 2 - Create the Linux VM

Step 3 - Open port 80 for web traffic

Step 4 - Get the VM's IP addresses

Step 5 - SSH into the VM from Cloud Shell

Step 6 - Install NGINX inside the VM

Lab 5 - Verify and Clean Up

Verification

1. Steps 8-9 already deallocated and deleted the VM and its attached resources.
2. Verify nothing billable is left: Only resources from other labs (e.g.
3. Lab 4's VM and VNet, if you kept them) should remain.
4. Keep the resource group rg-az900-labs - it is reused by the remaining labs and deleted only in Lab 16.

Cleanup Discipline

1. Run the lab cleanup section exactly.
2. Keep rg-az900-labs only when the next lab needs it.
3. Confirm no paid resource is left running.
4. Lab 16 performs the final course cleanup.

Lab 6 - Create a Web App with Azure App Service

Domain 2 - Describe Azure architecture and services

In this lab you create a fully managed web app on Azure App Service, deploy a simple HTML page to it with a single CLI command, and explore the scaling options that PaaS gives you without touching a...

Day 1

[labs/lab-06-app-service-webapp.md](#)

Hands-on

Follow the Learner Guide exactly for commands, portal fields, verification and cleanup.

Lab 6 - Key Steps

Step 1 - Create the resource group (if it doesn't exist)

Step 2 - Create the Web App

Step 3 - Browse the default placeholder page

Step 4 - Open Cloud Shell and create a simple page

Step 5 - Zip and deploy the page

Step 6 - Verify the deployment

Lab 6 - Verify and Clean Up

Verification

1. Keep the resource group rg-az900-labs - it is reused until Lab 16.
2. Delete only this lab's resources: Or in the portal: open rg-az900-labs, tick the web app and the App Service plan, click Delete and confirm.
3. App Service is PaaS: Azure manages the OS, web server, patching, and TLS - you manage only your code .
4. An App Service plan defines the compute that one or more web apps run on.

Cleanup Discipline

1. Run the lab cleanup section exactly.
2. Keep rg-az900-labs only when the next lab needs it.
3. Confirm no paid resource is left running.
4. Lab 16 performs the final course cleanup.

Lab 7 - Deploy a Container with Azure Container Instances

Domain 2 - Describe Azure architecture and services

In this lab you run a public Docker container image on Azure Container Instances (ACI) with a single command, browse the running app on a public URL, and inspect its logs - all without provisioning any...

Day 1

[labs/lab-07-container-instances.md](#)

Hands-on

Follow the Learner Guide exactly for commands, portal fields, verification and cleanup.

Lab 7 - Key Steps

Step 1 - Open Cloud Shell and ensure the resource group exists

Step 2 - Create the container instance

Step 3 - Get the public FQDN

Step 4 - Browse the running container

Step 5 - View the container logs

Step 6 - Restart the container group

Lab 7 - Verify and Clean Up

Verification

1. Step 8 already removed the only resource this lab created.
2. Verify nothing is left: The output should be empty.
3. Keep the resource group rg-az900-labs itself - it is reused until Lab 16.
4. Azure Container Instances runs containers on demand with no VMs or orchestrator to manage - the fastest way to run a container in Azure.

Cleanup Discipline

1. Run the lab cleanup section exactly.
2. Keep rg-az900-labs only when the next lab needs it.
3. Confirm no paid resource is left running.
4. Lab 16 performs the final course cleanup.

Lab 8 - Create a Virtual Network and Test Private Connectivity

Domain 2 - Describe Azure architecture and services

In this lab you build a virtual network with two subnets, place a "web" VM with a public IP in one and a "db" VM with no public IP in the other, then prove the two can talk privately over the VNet. This...

Day 1

[labs/lab-08-virtual-network.md](#)

Hands-on

Follow the Learner Guide exactly for commands, portal fields, verification and cleanup.

Lab 8 - Key Steps

Step 1 - Ensure the resource group exists

Step 2 - Create the virtual network and subnets

Step 3 - Inspect the VNet in the portal

Step 4 - Create the web VM (with public IP)

Step 5 - Create the db VM (NO public IP)

Step 6 - SSH to the web VM

Lab 8 - Verify and Clean Up

Verification

1. Delete both VMs, their NICs/disks/IPs, and the VNet (keep resource group `rg-az900-labs` - it is reused...
2. An Azure Virtual Network is your private IP space in the cloud; subnets segment it by tier or workload.
3. VMs in different subnets of the same VNet communicate automatically over private IPs - no extra routing needed.
4. A VM without a public IP is unreachable from the internet - a fundamental security control.

Cleanup Discipline

1. Run the lab cleanup section exactly.
2. Keep rg-az900-labs only when the next lab needs it.
3. Confirm no paid resource is left running.
4. Lab 16 performs the final course cleanup.

Lab 9 - Create a Storage Account and Work with Blob Storage

Domain 2 - Describe Azure architecture and services

In this lab you create a general-purpose storage account, upload a blob, switch its access tier, and share it securely with a time-limited SAS URL - then list the same blobs from the CLI. This maps to...

Day 2

labs/lab-09-storage-blobs.md

Hands-on

Follow the Learner Guide exactly for commands, portal fields, verification and cleanup.

Lab 9 - Key Steps

Step 1 - Create the storage account

Step 2 - Create a private blob container

Step 3 - Upload a file via the portal

Step 4 - Change the blob's access tier Hot → Cool

Step 5 - Try to open the blob URL anonymously

Step 6 - Generate a SAS URL and open it

Lab 9 - Verify and Clean Up

Verification

1. The storage account costs almost nothing while nearly empty, so you may keep it - it will be removed with rg-az900-labs in Lab 16.
2. To delete it now instead: Keep the resource group rg-az900-labs itself - it is reused until Lab 16.
3. A storage account is a globally-unique namespace hosting Blobs, Files, Queues, and Tables.
4. Access tiers trade storage cost against access cost for infrequently used data.

Cleanup Discipline

1. Run the lab cleanup section exactly.
2. Keep rg-az900-labs only when the next lab needs it.
3. Confirm no paid resource is left running.
4. Lab 16 performs the final course cleanup.

Lab 10 - Create an Azure SQL Database

Domain 2 - Describe Azure architecture and services

In this lab you deploy a fully managed Azure SQL Database preloaded with the AdventureWorksLT sample data and query it directly from the browser - no database server to install, patch, or back up. This...

[Day 2](#)[labs/lab-10-azure-sql.md](#)[Hands-on](#)

Follow the Learner Guide exactly for commands, portal fields, verification and cleanup.

Lab 10 - Key Steps

Step 1 - Start the SQL Database wizard

Step 2 - Create a new logical server

Step 3 - Choose a cheap compute + storage tier

Step 4 - Configure networking

Step 5 - Load sample data and create

Step 6 - Query the database from the browser

Lab 10 - Verify and Clean Up

Verification

1. Delete the database and the logical server .
2. In Cloud Shell: Or in the portal: open rg-az900-labs, tick db-az900 and the SQL server, click Delete.
3. Basic tier bills daily, so don't leave it running.
4. Azure SQL Database is a PaaS relational database: Microsoft manages the OS, patching, high availability, and automated backups.

Cleanup Discipline

1. Run the lab cleanup section exactly.
2. Keep rg-az900-labs only when the next lab needs it.
3. Confirm no paid resource is left running.
4. Lab 16 performs the final course cleanup.

Lab 11 - Explore Microsoft Entra ID: Users and Groups

Domain 2 - Describe Azure architecture and services

In this lab you explore your tenant in Microsoft Entra ID (formerly Azure AD), create a user and a security group, and sign in as that user to see what "authenticated but not authorised" looks like....

Day 2

labs/lab-11-entra-id.md

Hands-on

Follow the Learner Guide exactly for commands, portal fields, verification and cleanup.

Lab 11 - Key Steps

Step 1 - WARNING: use your own tenant, not your company's

Step 2 - Open Microsoft Entra ID and note your tenant details

Step 3 - Create a new user

Step 4 - Create a security group

Step 5 - Add the user to the group

Step 6 - Sign in as the new user

Lab 11 - Verify and Clean Up

Verification

1. Keep the user az900.learner and the group grp-az900-learners - Lab 12 reuses them. They cost nothing.
2. Keep the resource group rg-az900-labs - it is reused until Lab 16.
3. Microsoft Entra ID is Azure's cloud identity service; every subscription trusts one tenant, identified by a primary domain and tenant ID.
4. Users are identities; security groups are the unit you should manage access with.

Cleanup Discipline

1. Run the lab cleanup section exactly.
2. Keep rg-az900-labs only when the next lab needs it.
3. Confirm no paid resource is left running.
4. Lab 16 performs the final course cleanup.

Lab 12 - Manage Access with Azure RBAC

Domain 3 - Describe Azure management and governance

In this lab you explore Azure role-based access control (RBAC) on the `rg-az900-labs` resource group: you inspect built-in roles, assign the **Reader** role to the Lab 11 user `az900.learner`, prove...

Day 2

[labs/lab-12-rbac.md](#)

Hands-on

Follow the Learner Guide exactly for commands, portal fields, verification and cleanup.

Lab 12 - Key Steps

Step 1 - Open Access control (IAM) on the resource group

Step 2 - View existing role assignments and scope inheritance

Step 3 - Compare Reader, Contributor and Owner role definitions

Step 4 - Assign the Reader role to az900.learner

Step 5 - Test the assignment as az900.learner

Step 6 - Prove that Reader blocks create and delete

Lab 12 - Verify and Clean Up

Verification

1. Confirm the Reader assignment for az900.learner on rg-az900-labs is removed .
2. No resources were created in this lab, so nothing else to delete.
3. Keep rg-az900-labs, the Lab 11 user and group - later labs still use them.
4. Reader, Contributor and Owner are the core built-in roles; only Owner can manage access for others.

Cleanup Discipline

1. Run the lab cleanup section exactly.
2. Keep rg-az900-labs only when the next lab needs it.
3. Confirm no paid resource is left running.
4. Lab 16 performs the final course cleanup.

Lab 13 - Apply Resource Tags and Resource Locks

Domain 3 - Describe Azure management and governance

In this lab you organise resources with tags (for ownership, environment and cost reporting) and protect them with resource locks that block accidental deletion - two core Azure governance tools. This...

Day 2

labs/lab-13-tags-locks.md

Hands-on

Follow the Learner Guide exactly for commands, portal fields, verification and cleanup.

Lab 13 - Key Steps

Step 1 - Add tags to the resource group

Step 2 - Confirm tags are NOT inherited by resources

Step 3 - Tag an individual resource

Step 4 - Filter All resources by tag

Step 5 - Manage tags with the Azure CLI

Step 6 - Add a Delete (CanNotDelete) lock on the resource group

Lab 13 - Verify and Clean Up

Verification

1. Ensure the lock lock-az900-nodelete is deleted .
2. Leave the tags in place - they cost nothing and Lab 15 uses them when grouping costs.
3. Keep rg-az900-labs and the storage account for the remaining labs.
4. Resource-group tags are not inherited by child resources by default .

Cleanup Discipline

1. Run the lab cleanup section exactly.
2. Keep rg-az900-labs only when the next lab needs it.
3. Confirm no paid resource is left running.
4. Lab 16 performs the final course cleanup.

Lab 14 - Enforce Standards with Azure Policy

Domain 3 - Describe Azure management and governance

In this lab you use Azure Policy to enforce an organisational standard - restricting which regions resources may be deployed to - and watch a non-compliant deployment get denied at creation time, even...

Day 2

[labs/lab-14-azure-policy.md](#)

Hands-on

Follow the Learner Guide exactly for commands, portal fields, verification and cleanup.

Lab 14 - Key Steps

Step 1 - Open the Policy service

Step 2 - Browse built-in policy definitions

Step 3 - Assign "Allowed locations" to rg-az900-labs

Step 4 - Wait for the assignment to take effect

Step 5 - Attempt a non-compliant deployment

Step 6 - View the Compliance blade

Lab 14 - Verify and Clean Up

Verification

1. Confirm the Allowed locations assignment is deleted - the built-in **definition** stays, only your **assignment** is removed.
2. No resources were created , so nothing else to delete.
3. Keep rg-az900-labs for the remaining labs.
4. Azure Policy enforces organisational standards and continuously assesses compliance.

Cleanup Discipline

1. Run the lab cleanup section exactly.
2. Keep rg-az900-labs only when the next lab needs it.
3. Confirm no paid resource is left running.
4. Lab 16 performs the final course cleanup.

Lab 15 - Estimate and Control Costs: Pricing Calculator, TCO and Budgets

Domain 3 - Describe Azure management and governance

In this lab you estimate the price of a workload with the Azure Pricing Calculator, compare on-premises versus Azure costs with the TCO Calculator, and then control real spend with Cost analysis and a...

Day 2

[labs/lab-15-cost-management.md](#)

Hands-on

Follow the Learner Guide exactly for commands, portal fields, verification and cleanup.

Lab 15 - Key Steps

Step 1 - Part A: Open the Pricing Calculator and add a Virtual Machine

Step 2 - Add a Storage account to the estimate

Step 3 - Compare Pay-as-you-go with savings plans and reservations

Step 4 - Export or share the estimate

Step 5 - Part B: Model an on-premises workload in the TCO Calculator

Step 6 - View the 5-year TCO comparison report

Lab 15 - Verify and Clean Up

Verification

1. In Cost Management > Budgets, you may keep budget-az900 - or select it, click the ... menu and Delete it now.
2. Keep rg-az900-labs and its resources - Lab 16 performs the final course clean-up.
3. Cost is driven by resource type/size, consumption, region, commitment model and network egress.
4. Reservations and savings plans trade a 1-3 year commitment for significant discounts on steady workloads.

Cleanup Discipline

1. Run the lab cleanup section exactly.
2. Keep rg-az900-labs only when the next lab needs it.
3. Confirm no paid resource is left running.
4. Lab 16 performs the final course cleanup.

Lab 16 - Monitor Your Environment: Advisor, Service Health and Azure Monitor

Domain 3 - Describe Azure management and governance

In this final lab you tour Azure's monitoring stack: Azure Advisor's recommendation categories, Service Health alerts for platform incidents, and Azure Monitor's Metrics and Activity log - then you...

Day 2

[labs/lab-16-monitoring.md](#)

Hands-on

Follow the Learner Guide exactly for commands, portal fields, verification and cleanup.

Lab 16 - Key Steps

Step 1 - Review Azure Advisor recommendations

Step 2 - Download the Advisor recommendations CSV

Step 3 - Explore Service Health

Step 4 - Create an action group for notifications

Step 5 - Finish creating the Service Health alert rule

Step 6 - Chart a metric in Azure Monitor

Lab 16 - Verify and Clean Up

Verification

1. All course clean-up was performed in Steps 9-12: 1.
2. Deleted Service Health alert rule alert-servicehealth-sea and action group ag-az900-email.
3. Removed any remaining resource lock, then deleted resource group rg-az900-labs .
4. Deleted Entra ID user az900.learner and group grp-az900-learners .

Cleanup Discipline

1. Run the lab cleanup section exactly.
2. Keep rg-az900-labs only when the next lab needs it.
3. Confirm no paid resource is left running.
4. Lab 16 performs the final course cleanup.

Course Wrap-Up

-  You created and governed common Azure resources through the portal and Cloud Shell.
-  You practised cost, security and monitoring fundamentals that map directly to AZ-900.
-  Delete remaining resources in Lab 16 to avoid ongoing Azure charges.
